TITLE : IC CARD, IC MODULE FOR IC CARD
AND CARD MAIN BODY

ABSTRACT : PURPOSE: To enable the utilization as a plurality of IC cards by mounting an IC module and a card main body formed so as to make the IC module detachable.

CONSTITUTION: An IC card is constituted of an IC module 10 and a card main body 11 having a cavity part 12, which has a shape and size almost same to those of the IC module 10 and is provided with a surface opening part 13 slightly large than the IC module 10, formed therein. Therefore, by warping the card main body 11 so as to turn the opening part 13 to the outside, the size of the surface opening part 13 can be temporarily made larger than that of the IC module 10. Therefore, by inserting the IC module 10 in the cavity part 12, the IC module 10 can be mounted in the card main body 11. By this method, the IC module 10 can be separated from the card main body 11.
